**Purpose of Contact:** 207 Tank Characterization Sampling

## Discussion

After removal of Tank 207 (T-29) located in the 700 area to the northwest of Building 776 and to the east of the former cooling tower in IHSS 121, RISS-ER plans to perform surface soil sampling within the footprint of the tank. Tank 207 was installed in 1952 and used to store untreated waste from various buildings on-site. The tank contained process wastes that consisted of acids, bases, solvents, radionuclides, metals, chlorides, oils and greases.

Following removal of Tank 207, two soil samples will be collected within the tank footprint. One sample will be collected near the point where the tank drain line is attached to the bottom of the tank. The second sample will be collected below the location of the tank overflow pipe out-fall.
